

You can lookup Expo UI docs on the Expo site <https://expo.dev/>

At the moment there is only one “users” data table in D1 with these columns:

clerkId email firstName lastName displayName role coach org membership status synced

Current available roles are: admin | coach | athlete

Coach is a reference to a ‘coach’ role user in users table.

Org can be sg | sgOnline | none

Membership can be "none" | "club" | "online"

Status can be "none" | "active" | "paused" | "banned" | "locked" (these overlap Clerk auth status values)

We will need to add tables for any new data.

For storage and video Cloudflare has R2 and Stream. R2 is significantly cheaper than stream for large volume.
