

 Monday, Sept 14 @ 8:00 PM PT  Tuesday 11:00 AM AWST (Perth)  Target: joel@smallgoodsgym.com

1. Executive Summary & Strategic Positioning

Joel Mullen is the founder and head coach of **Small Goods Gym** in Morley, Perth. He runs a boutique strength, powerlifting, and athletic rehabilitation facility alongside **Holly Hunt** (Competitive Powerlifter, Olympic Weightlifter, and Physiotherapist).

Your High-Status Framing on the Call

You are not an agency salesperson pitching slide mockups. You are a **Sports Technology Architect** with an Olympic and Paralympic/adaptive sports background. You are presenting *working, tested software* designed to plug directly into the backend security built by his developer, **Javier**.

2. Joel's Original Audio Brief Decoded

What Joel Shared	The Real Anxiety	How You Address It
"Javier built auth/user shell, but no frontend UI."	Fear of sunk cost or dev conflict before February launch.	"Javier did the heavy lifting on security. We built a decoupled client that talks directly to his auth tokens. Zero rewrites."
"WhatsApp groups for events & RSVP are chaotic."	Notification fatigue, lost signups, no capacity limits on platform sessions.	Show the RSVP & Waitlist UI (12-spot platform cap, offline sync, 1-tap booking).
"I want clean program delivery & PB tracking with video."	Lifters struggle with complex spreadsheets while sweating and fatigued.	Show the Gym-Floor Mobile Logger (single-movement card, 64px Fitts tap targets, instant Vimeo embeds).
"Long term: limb lengths, leverages, & VBT velocity for AI."	Desire to differentiate Small Goods from generic commercial gym apps.	Show the Biomechanical Dashboard (femur/torso sliders, dynamic #Long Femurs badge, Holly's triage gateway).

3. The 30-Minute Call Run-of-Show

00 - 05 min

Validate his Morley gym culture, Holly's clinical rehab, and reassure him immediately that Javier's auth groundwork is 100% preserved.

05 - 15 min

Walk through the mobile gym-floor logger, coach anthropometry sliders, and platform waitlist system.

15 - 22 min

Connect his Activforce 2 dynamometer and Enode accelerometer usage with automated NDIS Plan Manager capacity building reports.

22 - 27 min

Present the decoupled JWT token architecture. Explain how Javier stays backend authority while our clients deliver the UI.

27 - 30 min

Agree to send Javier the Developer Integration Guide. Lock in Phase 1 scope for February rollout.

4. Live Demo Walkthrough Playbook

Demo 1: Gym-Floor Athlete Logger

File: [workout-logger-preview.html](#) (Open in mobile view)

- **The Frame:** *"Athletes have chalky, sweaty hands and CNS fatigue. We designed this around 64px tap targets, single-movement focus, and sub-400ms instant feedback."*
- **Action 1:** Tap **+2.5kg** or **+5kg**. Show instant weight adjustment without opening a virtual keyboard.
- **Action 2:** Tap **Complete Set 1**. Point out immediate green confirmation state and the auto rest-timer.
- **Action 3:** Highlight the **embedded demonstration video** directly above the set inputs. Lifters never leave the app to verify cues.
- **Action 4:** Scroll to the **VBT Velocity Simulator**. Show how velocity decay below 0.75 m/s warns lifters before form breakdown occurs.

Demo 2: Biomechanical Leverage & Coach Profile

File: [athlete-profile-preview.html](#) (Open in desktop view)

- **The Frame:** *"A 6'1" lifter with long femurs cannot squat with the same cues as someone with short femurs. Here is how your coaching eye is digitized."*
- **Action 1:** Drag **Femur Length** to 48cm and **Torso** to 42cm.
- **Action 2:** Watch the ratio calculate live (1.14).
- **Action 3:** Point out dynamic badges: `#Long Femurs` , `#High Hip Squat` , `#Short Torso` .
- **Action 4:** Show **AI Biomechanical Directives** (stance width, low-bar placement, hinge cues).
- **Action 5:** Scroll to **Holly Hunt Clinical Review Gateway**: show how pain flags (e.g. lumbar tenderness) route directly into Holly's queue with limb proportions attached.

5. The Javier Handshake: Technical Architecture & Schemas

Joel's biggest fear is dev friction. Your message is pure reassurance:

"Javier did the heavy lifting on auth and security. We built a decoupled JWT architecture that connects seamlessly to his endpoints."

The 5 Database Schemas Ready in PostgreSQL

1. `athlete_profiles` : Height, femur, torso, arm span, auto-calculated leverage tags (linked to Javier's `user_id`).
2. `exercises` : Categories, mechanical tags (`quad_dominant` , `hip_hinge`), and demonstration video links.
3. `workout_sessions` : Scheduled sessions, completion status, coach notes, athlete feedback.
4. `exercise_logs` : Granular set-by-set weight, reps, RPE (1-10), and accelerometer velocity (m/s).
5. `personal_bests` : Automatically aggregated historical records across all major lifts.

6. The NDIS & Adaptive Athletics Strategy

Small Goods Gym is an **Unregistered NDIS Provider** delivering **Evidence-Based Capacity Building** for Plan-Managed and Self-Managed participants.

The Real NDIS Challenge in Australia

Plan Managers and Support Coordinators must justify continuing funding to the NDIA with *objective functional outcomes*. Passive clinic massages don't prove capacity building. Small Goods builds real strength and fall prevention.

How the Software Becomes an NDIS Superpower

- **1-Click Audit-Ready Reports:** Automatically exports isometric peak force from the **Activforce 2 Dynamometer** and power output from the **Enode Accelerometer** into a plan-review PDF.
- **Carer / Support Coordinator Portal:** Secure read-only access for coordinators to download progress metrics without manual coach paperwork.
- **Adaptive Movement Presets:** Built-in accommodations for seated/wheelchair lifting, grip-assist accessories, and unilateral variations.

High-Impact Questions to Ask Joel

- "Joel, how many hours a month do you and Holly spend compiling manual progress reports for NDIS Plan Managers?"
- "Are your Activforce 2 and Enode numbers currently living in separate silos from your workout logs?"
- "When an NDIS plan review comes up, what specific metric makes a Plan Manager immediately approve the next round of funding?"
- "For lifters like 'P' or neuro-divergent athletes, does Holly track sensory or autonomic fatigue thresholds alongside physical RPE?"

7. 1-Page On-Screen Call Cheat Sheet

SMALL GOODS GYM CALL CHEAT SHEET (JOEL MULLEN)

TIME: Monday 8:00 PM PT (11:00 AM Tuesday Perth) | EMAIL: joel@smallgoodsgym.com
 PARTNERS: Joel Mullen (Head Coach), Holly Hunt (Physio/Coach), Javier (Backend Dev)

CORE OBJECTIVE:

Show working software. Build trust. Prove seamless Javier integration. Position Small Goods as the benchmark in strength, biomechanics, and NDIS capacity building.

OPENING (2 mins):

"Joel, I looked at your setup in Morley, your work with Holly, and your NDIS athletes. Javier built solid auth security. Today I'll show you the frontend and biomechanics engine we built to sit on top of his work so you hit your February target."

DEMO SEQUENCE (10 mins):

1. workout-logger-preview.html -> 64px Fitts touch targets, single-movement card, inline video, sub-400ms haptic confirmation, VBT velocity dropoff.
2. athlete-profile-preview.html -> Femur/Torso sliders, ratio > 1.10 = #LongFemurs, AI coaching cue adjustments, Holly Hunt clinical injury interceptor.
3. RSVP System -> 12-spot platform cap, auto-waitlist, offline gym dead-zone queue.

JAVIER HANDSHAKE:

- Decoupled JWT Bearer Tokens: Javier authenticates, our PWA passes the token.
- No backend rewrite: Javier's user and permission tables stay 100% intact.
- Python FastAPI microservice handles VBT, limb leverage math, and progression.

NDIS / CLINICAL HOOKS (Hardware: Activforce 2 + Enode):

- Problem: Plan Managers need objective proof of Capacity Building for plan reviews.
- Solution: 1-click audit-ready PDF export showing peak force & functional gains.
- Kamilla Advantage: High-performance Olympic/Paralympic adaptive architecture.

KILLER QUESTIONS TO DROP:

- "How much time do you and Holly spend typing manual progress reports for Plan Managers?"
- "Are your Activforce 2 and Enode numbers currently siloed from your workout logs?"
- "What evidence makes a Plan Manager instantly say 'yes' to renewing funding?"

CLOSE & NEXT STEPS:

- Send Javier 'javier-integration-guide.md' for a 5-minute technical review.
- Lock in Phase 1 scope: Gym-floor logger + RSVP/Waitlist for February rollout.
